High Risk Pipelines & Cables Description

The Moyle Interconnector consists of four **high voltage** electricity cables running from Curraie Port, South Ayreshire, to Port Muck, Islandmagee. The Scotland to Northern Ireland Pipeline (SNIP) conveys natural gas at **high pressure** from Portnaughton Bay on the Rhinns Penninsular to Castle Robin Bay Islandmagee. This pipeline also extends across Belfast Lough from Carrickfergus to Kinnegar. These pipelines and cables pose **high risk** (snagging, electrocution, ignition and buoyancy) to fishing activities.

Emergency procedures

1. If you suspect you have snagged a subsea cable or pipeline, **DO NOT** endanger your vessel and crew by attempting to recover your gear.
2. Carefully plot your vessel's position as accurately as possible.
3. Advise the Coastguard of your situation and call the 24 hour Emergency Number stating that an incident is occurring concerning a subsea cable or pipeline.

Reducing the risks whilst fishing

To reduce the risks of fishing near these subsea pipelines and cables, it is essential to be up to date with KISORCA and FishSAFE information. This information is easy to install on your vessel's fishing plotter and ensures skippers are able to make informed decisions for their safety. Any interaction of fishing gear causing even the slightest movement of the pipelines or cables, poses a threat to the fishing vessel. In the interests of fishing safety and to prevent damage to pipelines or cables, fishermen are advised to exercise extreme caution when fishing in the vicinity of the pipeline and cable corridors. Loss of fishing gear, fishing time, and catch can result if a trawler snags a subsea cable or pipeline and there is serious risk of loss of life.

Emergency Number: 08009170249
